Ecology of Riparian Forests in Japan | SpringerLink  
Riparian forests along streams and rivers are diverse in species, structure, and regeneration processes, and have important ecological functions in maintaining landscape and biodiversity. This book discusses riparian forests from subpolar to warm-temperate zones, covering headwater streams, braided rivers on alluvial fans, and low-gradient meandering rivers. It presents the dynamics and mechanisms that govern the coexistence of riparian tree species, tree demography, the response to water

1.4 Research on riparian forests in Japan To create this book, we assembled as many scientific experts on riparian forest ecology in Japan as possible, thereby covering research sites from Hokkaido to Kyushu (Fig. 9).

Disturbance regimes and geomorphic processes peculiar to riparian ecosystems are covered in Part 2. Part 3 discusses a phytosociological study, and the regeneration and coexistence mechanisms of headwater streams are examined in Part 4. Part 5 addresses braided rivers on
